

Because for you, a career is about development, not just collecting titles.

To reinforce our DevOps team at the locations Kiel and Hamburg as soon as possible, we are looking to recruit a

DevOps Engineer (m/f/d)

Responsibilities:

- Together with your team, you ensure the optimal design of our software development processes from development to operation. Your own ideas and implementations have a positive impact on the working environment in the adjacent units.
- You keep learning in an experienced team and continuously expanding your DevOps skills through targeted training.
- You use common DevOps tools (Ansible, Terraform, Kubernetes, Gitlab CI/CD) and support our software production with them. You set standards and establish cloud-based DevOps processes.
- You support and develop Kubernetes clusters – both on-premises and in the cloud.
- You work with agile teams and in an open, collaborative and trusting environment and can actively promote the open source community.

Your Profile:

- A university degree (computer science, business informatics, mathematics, physics) forms the basis for your work with us.
- You like Linux, know a console not just from The Matrix, and are interested in cloud technologies (SaaS, PaaS, IaaS, IaC, GitOps).
- You are familiar with Kubernetes, CI/CD and Terraform.
- You are equally enthusiastic about the development and the operation of a product and you like facing the challenges of complex DevOps processes.
- You have high quality standards for the results of your tasks, work independently and have a fluent command of English or German.

Our Offer:

- A job with responsibility. Through your work, you make a significant contribution to the development and secure operation of payments products in the cloud.
- Being part of a Great Place to Work® which is characterised by a cooperative, trusting and appreciative working environment.
- You are free to organise your working day: flexible working hours with remote working are possible.
- Comprehensive support on your way to professionalism from experienced colleagues who will accompany your start at PPI and provide you with comprehensive training.
- Mentoring programme: intensive support beyond the induction phase as well as a comprehensive training programme.
- Professional software development and modern technologies in agile teams and projects. Room for initiative and a lot of freedom to actively shape your daily work.

A good match?

If so, we look forward to receiving your full online application with details of your salary requirements and your preferred start date.
